APPLICATION

Based on AI, TTOOL is an innovative product that will be useful in various fields in modern society.

Practicality of Technology: It combines various technologies such as communication, autonomous driving, and interaction to be used in various industries.

Social Contribution and Innovation: Improving people's lives conveniently and safely in industry, healthcare, security, education, etc.

Affordability: Reduce costs and increase corporate profitability through multifunctionality and learning AI.

Convenience of daily life: Provide emotional stability with AI that enables emotional exchange and control home appliances through voice commands.

Safety and Security: Enhanced safety and security with a variety of sensors and technologies.

Advances in AI: Improving performance and advancing AI technologies through continuous user feedback learning.

'TTOOL' has the potential to be useful in various fields with various functions and innovative technologies.
